

Exciting Egg Breakthrough

New York - Doctors are hailing an amazing “super-charged” natural egg breakthrough as a revolutionary approach for optimizing a healthy immune system.

The breakthrough dietary supplement called “hyperimmune egg” is produced by grain-fed hens that lay eggs that are scientifically-fortified with antibodies and other immune factors.

Hyperimmune eggs contain the same amount of protein, calories and fat as regular eggs, but are enriched with advanced immune co-factors through a technology similar to human vaccination.

The contents of the eggs are turned into a powder, called i²⁶®, which is either used by itself, or formulated into a variety of different products for sports performance, weight management, children, and pets.

“i²⁶® is a very exciting whole-food supplement that could make a great difference in the health of millions of Americans,” declared Dr. Adrienne Buffaloe, former Medical Director at the Environmental Medicine Center in New York.

“The unique qualities of these eggs contribute to a strong human immune system – and a healthy immune system is the best defense for maintaining peak health and reducing one’s risk of disease.”

Dr. Buffaloe, an environmental medicine specialist, added that i²⁶® enhances daily supplementation to a level beyond normal nutrition.

“I take the i²⁶® formula every day and recommend it to many of our patients who’ve experienced impressive results. It’s one of the most effective natural products ever developed and has made a huge difference in my life as well”.

Research shows that hyperimmune egg can increase energy levels, improve cardiovascular, digestive and circulatory health, support healthy and flexible joints, and promote a sense of well-being.*

The 20-year research program to develop the hyperimmune egg technology cost more than \$50-million, and is protected by over 100 worldwide patents and patent submissions.

Clinical tests on hyperimmune eggs by clinicians at the U.S. Army, Beth Israel Deaconess Medical Center in Boston, and at Cornell University, NYC have revealed that the enriched whole-food nutrient is safe, effective and has no side effects.

“I take i²⁶® personally and recommend it to my patients as an important health supplement,” says Dr. Leonard Seltzer, a pediatric allergy specialist in Wilmington, Delaware, who raves about his increased energy and improved digestive health.

“I advise patients that hyperimmune eggs are super-enriched eggs using state-of-the-art technology not unlike the advance used to make healthier non-fat dry milk from whole milk. Science is simply advancing the quality of nature and we are all better off if we take advantage of these discoveries,” Dr. Seltzer added.

Harvard-trained Dr. Kenneth Kroll, MD, Board Certified in Anti-aging Medicine says that a strong immune system is critically important for good health, peak energy and overall well-being.

“The i²⁶® formula is a most impressive natural product approach for energizing, strengthening and balancing immune function. I take the i²⁶® formula because it lets my body do what it does best, naturally. I recommend it to others who want a sense of optimal balance and daily well-being.”

Pain management expert Dr. Robert O’Dell, director of the Arizona Back Institute in Phoenix, Arizona says of i²⁶® and its research: “Besides boosting my energy and giving me deep restful sleep, I find that I’m far less prone to colds and the aches and pains that used to slow me down. i²⁶® is by far the finest whole-food supplement I’ve ever taken. I highly recommend it to everyone who wants to improve their health and maintain a peak performance lifestyle.”

Dr. Glen Winkel, a research physiologist in Colorado Springs, Colorado and member of the US Postal Service Masters Cycling team, says he noticed a dramatic response in his energy and recovery levels and significant stamina and endurance benefits during peak athletic performance.

“I rely on science to support a product’s claim and i²⁶® has impeccable research to support its immune response benefits. This discovery is a major breakthrough for human health and I will never personally be without it,” said Dr. Winkel.

Dr. Carolyn Matzinger, a board certified internal medicine specialist in Las Vegas, revealed: “After thoroughly investigating this whole-food formula, I began using i²⁶® both personally and in my internal medicine practice. I’ve had most impressive results with my patient’s cardiovascular, digestive, endocrine and joint health issues.

“My own energy levels are so much higher and the i²⁶® formula has really decreased the stress levels from my busy lifestyle. This is one of the most effective supplements a person can take and I highly recommend it to everyone who wants to improve their health and well-being,” Dr. Matzinger concluded.

i²⁶® Chewables come in Banana and French Vanilla flavors for \$31.99 a bottle, plus shipping and handling. For more information, contact _____.
